PRESET OR ADJUSTABLE PRESSURE REGULATOR

SMALL RETURN LINE FOR AIR, VAPOR AND FOAM
OVERVIEW

Welcome to PureFlow AirDog home of the AirDog®II Fuel Air Separation, Filtration and Delivery System for the Diesel Engine

The AirDog®II is a premium replacement fuel pump and complete filtration system for the Dodge Cummins Diesel Engine.

The AirDog®II delivers clean fuel to the engine free of virtually all air/vapor and at a positive flow. Thus, allowing the engine “test cell” performance and efficiency, while in “real world” use.

The DF-100, DF-165 & DF-200 have an adjustable regulator and are preset at 15/17 PSI. The AirDog®II pressure regulator features Stainless Steel components and soft seat piston.

The AirDog®II DF-100 is recommended for stock and slightly modified 5.9L and 6.7L Cummins Diesels.

The AirDog®II DF-165 Adj. is recommended for highly modified 5.9L and 6.7L Cummins Diesels.

The DF-200 is for EXTREMELY MODIFIED Cummins Diesels.

*PureFlow® products are manufactured with a personal touch, unsurpassed attention to detail and the most stringent Quality Assurance!*

TYPICAL INSTALLATION LAYOUT

![Diagram](image)

The AirDog®II draws fuel from the fuel tank through a high flow suction tube, removing water, particulates, and air/vapor. A regulated pressurized flow is maintained to meet the engine’s varying fuel demands. The AirDog®II returns the separated air/vapor and foam to the fuel tank.
QUICK CONNECT COMPONENT OVERVIEW

Provided in this kit is an OE style quick connection system. This system works to allow for a quick, clean, and professional install.

SAE J2044 Quick Connect System

The SAE J2044 quick connect system is the most commonly used system in the automotive industry. The images below show the formation of SAE J2044 connection. To connect the assemblies, simply insert the male end form into the mating female connector. Push firmly until you hear it “click” into place. To disconnect the fittings, press down and hold the blue tabs on the female connector while you firmly pull the assembly apart.

AirDog® II

INSTALLATION GUIDELINES!

The installation of your AirDog® II can be made relatively easy by following the steps outlined in this manual, and:

1. Inventory the package components completely. Notify PUREFLOW® AIRDOG immediately of any parts missing or damaged.

2. Read the installation manual completely. Understand how the system operates and installation recommendations before beginning installation.

3. The installation recommendations contained herein are suggested installation guidelines only. Individual installations may vary.

4. When installing the fuel module up-grade, be sure to drill the two additional ½” fuel ports as shown!

5. When installing the AirDog®II fuel lines, be sure to connect the ORIGINAL ENGINE RETURN LINE to the fuel tank as it was from the factory when the installation is complete!

If any installation procedure is uncertain, contact PUREFLOW AIRDOG for technical assistance.

SAFETY GUIDELINES!

CAUTION! Please be sure to chock the vehicle’s tires to prevent rolling.

CAUTION! Please use proper supports when working beneath an elevated vehicle.

CAUTION! Most diesel pickups have two (2) 12volt batteries. Disconnect the battery cables to both batteries before proceeding with the AirDog®II installation.

CAUTION! Vehicle frame rails should not be drilled into or welded on.

CAUTION! Wear safety glasses when operating power tools such as drills and grinders or when using a punch or chisel.

CAUTION! Use common sense when routing fuel lines and electrical harnesses. Keep them away from hot exhaust components and/or moving parts. Properly secure lines to prevent chaffing.

NOTE: The pictures used in this manual are for example only and may not be exactly the same as your truck.

ILLUSTRATION OF QUICK CONNECT COMPONENTS
Installing the AirDog II® & Mounting Brackets on the Truck’s Frame!

4-1. Assemble the AirDog® mounting bracket to the frame bracket.

4-2. Use the spacer block to clear lines and wiring harnesses on the frame. Adjust the assembly up or down on the frame bracket as necessary for clearance.

4-3. Install a 1/2” male J2004 quick connect x 3/8” NPTF (08J2044) into the “ENGINE” and “FUEL IN” ports in the AirDog®II.

4-4. Install the 3/8” male J2004 quick connect x 1/8” NPTF fitting (06J2044) into the “TANK” port of the AirDog®II. This is the smaller port next to the port marked “ENGINE”.

**WARNING:** The NPT fitting threads must be lubricated with oil or anti-seize compound before installation to prevent galling!

4-5. Attach the AirDog® to the frame bracket assembly.
NOTE: The AirDog® II can be mounted on either the inside or the outside of the frame, as space or personal choice dictates.

4-5. Clamp the frame between the AirDog® II bracket assembly and the backing plate using the bolts, lock washers, and nuts included in the kit.

4-6. Position the AirDog® II on the frame as necessary for clearance.  
NOTE: Be sure to mount the AirDog® II so the ‘FUEL IN’ port is directed toward the rear of the vehicle.

NOTE: Some pickup model frame rails have a bracket that is used to support the frame during the manufacturing process. If this bracket is on your frame rail and obstructs the proper positioning of the AirDog® II mounting bracket, you may remove part or all of it, as needed. Be very careful not to damage the frame flange!

5A-1. Remove the “banjo bolt” and the original factory fuel supply line at the fuel inlet port of the CP-3 high pressure pump.

![Figure 15](image)

5A-2. Install the 12mm x ½” male SAE J2044 (WAP 102) fitting with the seal washer supplied into the inlet port of the CP-3 (Ref. Figure 15) vacated by the original banjo fitting. Do not over tighten the fitting. It may break.

![Figure 16](image)

5A-3. Insert the female quick connect end (see figure 16) of the “Pressure Hose Assembly” into the male quick connect fitting previously installed in the port marked “ENGINE”. You will hear a “click” when it connects.

5A-4. Connect the other end of the “Pressure Hose Assembly” to the inlet fitting installed in step 5A-2. It will also “click” when properly connected.

5A-5. Any excess fuel hose can be addressed by routing the hose in a fashion to take up the extra length, or a section of the hose can be removed. Push lock splices have been included if you choose to remove the excess hose.
Fuel Supply Line from the AirDog® II to the CP-3
For the 5.9L Cummins Engine, cont’d!

NOTE: Having routed the fuel line directly to the CP3, it is suggested to cap or plug the inlet and outlet ports of the bypassed filter canister. BE SURE TO RECONNECT THE INJECTOR PUMP AND ENGINE RETURN LINES AS THEY WERE ORIGINALLY!

Figure 17

Section 5 B
Fuel Supply Line from the AirDog® II to the CP-3
For the 6.7L Cummins Engine

The AirDog® II fuel filter is available in 2 micron media. When installing the AirDog® II fuel system it is recommended to bypass the factory filter canister.

5B-1. Remove the Quick Connect fitting and the original factory fuel supply line at the fuel inlet port of the CP-3 high pressure pump.

Figure 18

5B-2. Install the 12mm x ½” male quick connect fitting with the seal washer supplied into the inlet port of the CP-3 vacated by the original Quick Connect fitting.

Figure 19

CAUTION: Do not over torque the 12mm fitting. IT COULD BREAK!
Section 5B

Fuel Supply Line from the AirDog® II to the CP-3
For the 6.7L Engine, cont’d

5B-3 Insert the female quick connect end (see figure 20) of the “Pressure Hose Assembly” into the male quick connect fitting previously installed in the port marked “ENGINE”. You will hear a “click” when it connects.

Figure 20

5B-4. Connect the other end of the “Pressure Hose Assembly” to the inlet fitting previously installed in step 5B-2. It will also “click” when properly connected.

5B-5 Any excess fuel hose can be addressed by routing the house in a fashion to take up the extra length, or a section of the hose can be removed. Push lock splices have been included if you choose to remove the excess hose. “ENGINE”. Properly torque the fitting.

NOTE: Having routed the fuel line directly to the CP3, it is suggested to cap or plug the inlet and outlet ports of the bypassed filter canister. BE SURE TO RECONNECT THE INJECTOR PUMP AND ENGINE RETURN LINES AS THEY WERE ORIGINALLY.

CAUTION: When installing the AirDog® II fuel lines, be sure to reconnect the ORIGINAL ENGINE RETURN LINE to the fuel module as it was originally installed from the factory!
INSTALLING THE AIRDOG®
HIGH FLOW SUCTION TUBE

The AirDog® II DF-200 includes a ½” High Flow suction tube to accommodate the high flows of this system. To install the ½ suction tube it is necessary to either drop the fuel tank or to lift the truck bed.

NOTE: Should you choose to drop the fuel tank, support the tank as it is when it is installed on the truck. If you let it rest flat on the floor, the tank may squash out and the suction tube will be too short after the tank is re-installed in the truck. The suction tube, being cut too short may suck air as the fuel drops below ¼ tank level.

NOTE: Should you choose to pull the pickup bed to access the tank. Be sure to disconnect the tail light wires, fuel tank filler tube, and any other accessories or components that may be secured to the frame and bed.

When Dropping the Tank, Always Remember Safety First!

If you choose to remove the bed, properly support the truck bed to prevent serious injury or death!
NOTE: The fuel tank used for the pictures is an example only and may not be exactly the same as your tank.

IMPORTANT: Select a location for the suction tube that has adequate clearance below the bed. Also consider that under hard acceleration, fuel will migrate toward the back of the fuel tank.

5C-1. Remove the collection basket.

5C-2. Drill a 1-1/8” hole at the selected location in the fuel tank for the suction tube. Hold a container below the drill point to catch debris.

5C-3. Remove all burrs from the edge of the hole.

5C-4. Install the grommet in the new suction tube access hole.
INSTALLING THE HIGH FLOW SUCTION TUBE, Cont’d

5C-5. Measure and cut the suction tube to a length that will allow approximately 1/8” clearance off the bottom of the tank. It is suggested to form the end of the tube similar to Figure 32.

![Figure 32](image)

5C-6. Lubricate the bulkhead fitting with motor oil. Pressing firmly, insert the suction tube assembly into the grommet. Be sure the bulkhead fitting is completely seated in the grommet.

![Figure 33](image)  ![Figure 34](image)

5C-7. Re-install the Collection basket. Re-install the factory return line to the proper port of the Collection basket before the tank is fully re-installed

![Figure 35](image)

5C-8. Connect the end of the “Suction Hose Assembly” to the bulk head fitting while it is easily accessible. A “click” will be heard when it is properly installed.

5C-9 Any excess fuel hose can be addressed by routing the hose in a fashion to take up the extra length, or a section of the hose can be removed. Push lock splices have been included if you choose to remove the excess hose
INSTALLING THE HIGH FLOW SUCTION TUBE, Cont’d

5C-10. If the fuel tank was dropped to install the suction tube, re-install the fuel tank. If the truck bed was removed, reinstall the bed.

5C-11. Insert the female quick connect end (see figure 36) of the “Suction Hose Assembly” to the male fitting previously installed in the “Fuel In” port. A “click” will be heard when the fitting is properly connected.

Figure 36
Fuel Return Line from the AirDog® to the Tank

Installing the fuel 'Return to Tank' assembly in Filler Tube

5D-1. Cut filler tube as illustrated, removing ½ inches. Loose assemble clamps on each end of filler tube.

5D-3. Insert the female quick connect end (Figure 39) of the “Return Hose Assembly” into the previously installed male fitting for the tank port (step 4-4). The fitting will “click” when properly installed.

5D-4 Attach the other end of the “Return Hose Assembly” onto the male end form of the “Return Fuel Filler Tube” installed in step 5C-2. A” click” will be heard when the fitting is properly connected.

5D-5 Any excess fuel hose can be addressed by routing the hose in a fashion to take up the extra length, or a section of the hose can be removed. Push lock splices have been included if you choose to remove the excess hose.
The AirDog® wiring harness features water proof Deutsch connectors, relay, and fuse holder. When properly installed, the AirDog® is controlled by the engine’s ECM.

**WIRING DIAGRAM (In Red)**

![Wiring Diagram]

**Figure 40**
The AirDog® is activated by the ECM through a relay controlled wiring harness connecting directly to the original ECM Deutsch pump connector.

- Power Supply Red +
- Power Supply Black -
- Pressure Sensor Lead
- Motor Power Supply Lead
- Low Fuel Pressure Indicator Light Leads
- Female Power Lead Jumper Plugs into Fuel Module
- Male Power Lead Jumper Plugs into Factory Harness

**Figure 41**
CAUTION: If the OPTIONAL Low Pressure Indicator Light is not used, be sure to insulate the two (2) #10 Indicator Light connectors to prevent accidental contact.
Securing the Relay and Fuse Holder to the Vehicle

6-1. Secure the relay and fuse holder to the vehicle.

![Figure 42](image20230409_170314.jpg)  
Figure 42  
![Figure 43](image20230409_170315.jpg)  
Figure 43

Connecting the AirDog® Power Lead Jumpers

6-2. Remove the factory wire harness connection from the top of the fuel module as seen in (Figure 45)

![Figure 44](image20230409_170316.jpg)  
Figure 44

6-3. Plug the AirDog female power lead jumper into the top of the fuel module.

6-4. After a “click” is heard, slide the red locking clip over to lock the connection in place.

6-5. Plug the factory wire harness connector into the AirDog male power lead jumper. Again, listen for the “click”.

**NOTE:** The power supply leads can be connected to the battery or the alternator. Connecting the power supply leads to the alternator instead of the battery will create a corrosion free connection.

6-6. Route the Red & Black power supply leads to the alternator. Connect the Black (-) lead to the alternator Chassis Ground connection. Connect the Red (+) lead to the alternator Hot Lead going to the battery.

![Figure 45](image20230409_170317.jpg)  
Figure 45
**OR**

6-7. Should you choose to connect the power supply leads directly to the battery, connect the RED (+) lead to the POSITIVE (+) post of the driver’s side battery. Connect the BLACK (-) lead to the NEGATIVE (-) post of the same battery.  

![Figure 46](image)

**Connecting the Wiring Harness to the AirDog®**

6-8.1 Route the wiring harness to the AirDog® and connect the 2 pin Deutsch connector to the corresponding connector on the AirDog®.

![Figure 47](image)
INITIAL START PROCEDURE

The AirDog® II is a self priming system, however, to prevent potential damage and reduce the life expectancy of the system, it is recommended to fill only the pre-filter with diesel fuel before initial startup.

7-1. Fill the water separator with diesel fuel.

7-2. Turn the starter key to the on/run position.

**NOTE:** It may be necessary to momentarily engage the starter in order for the ECM to energize the AirDog® II.

7-3. While the AirDog® II is operating, bleed the fuel line to the engine of air by loosening the fuel line connection at the engine fitting. As soon as the line is purged of air and pure fuel is observed, properly tighten the fuel fitting. **NOTE:** put a rag or shop towel over and around fitting to prevent splatter. Catch all spilled fuel and dispose of properly.

7-4. Start engine!

**RECHECK ALL FUEL FITTINGS FOR LEAKAGE AND PROPER TORQUE. BE SURE ALL FUEL LINES ARE PROPERLY ROUTED TO PROTECT FROM EXCESSIVE HEAT AND SECURED TO PROTECT FROM CHAFFING AND ABRASION. RECHECK ALL ELECTRICAL LINES, SECURE AS NECESSARY.**

**Checking Pump Noise!**

**NOTE:** Each AirDog® II has been manufactured in a Quality Controlled process and wet tested for operation and performance before shipment. This is a very quiet and smooth running system. With fuel or air alone, the AirDog® II fuel pump will run very quietly. However, if any fuel fitting on the vacuum side, between the fuel tank and the AirDog® II or the pre-filter, has been left loose during the installation process, the system may suck air and will be very noisy. Additionally, *should the suction line be pinched or restricted, cavitations can cause vapor to form which will also cause pump noise.*

To check for this problem, unscrew the pre-filter 3 or 4 full turns and activate the AirDog® II by turning the ignition switch to on. If the AirDog® II runs quietly, then excessive air from a loose fitting, leaking pre-filter seal or vapor caused by restriction and a high vacuum is most likely the reason for the excessive noise. Correct as necessary.

A. The seal groove in the 3” filter is a snug fit and on occasion the seal has been found to not be fully seated. Remove the pre-filter; remove the seal from the top of the nut plate. Clean and lubricate the seal groove. Carefully replace the seal in the groove. Be sure to fully seat the seal.

B. Check all fittings, especially the quick connect at the tank.

C. For the AirDog® II gerotor pump to operate quietly, the maximum vacuum level allowable at the fuel inlet port should be no greater than 12” hg.
Filter Service Recommendations

Plugging of either the fuel filter or the water separator itself will cause low fuel pressure and low flow to the engine. If a low fuel pressure issue exists, replace the fuel filter.

The Water Separator

Replace the water separator every other time you change the Fuel Filter or if it becomes damaged or plugged. It is suggested to check/drain the water separator every three months or as needed should you experience excessive ‘water in fuel’ conditions. When installing the water separator, be sure to clean the under-side of the AirDog® II base. Follow the instructions printed on the pre-filter for proper tightening procedures.

CAUTION: Be extremely careful to prevent any contaminates or debris from entering the pre-filter when removing it for cleaning! Large debris will jam the Gerotor and cause the fuse to blow. This is not a warranty item. Should this happen, you can easily put the system back into working order. See the instructions on “How to clean the Gerotor” for proper procedures.

The Fuel Filter

Remove the fuel filter by turning it counter clockwise. Do Not pre-fill the fuel filter with fuel. The AirDog® II will fill the filter and prime the system automatically. Follow the instructions on the filter for proper tightening procedures.

CAUTION: Dispose of waste fuel and used filters properly to protect OUR environment!
Cleaning Debris from the Gerotor Assembly

**Step 1**
Remove the four (4) socket head cap crews that secure the gerotor cap.

**Step 2**
Carefully remove the O-rings. You will need to re-use them.

**Step 3**
Remove and clean the gerotor assembly. Be careful not to damage the gerotor.

**Step 4**
Clean the inside of the gerotor pocket.

**Step 5**
Replace the center gear.

**Step 6**
Align and install the outer gear and O-rings.

**Step 7**
Install the gerotor cap. Be very careful not to dislodge or pinch the O-rings.

**Step 8**
Loose assemble the cap screws. Torque the cap screws in an opposing pattern.
AirDog® II DF-100, DF-165, & DF-200 with Adjustable Pressure Regulator!

The AirDog® II rises to a new level of excellence with an Adjustable Regulator machined from stainless steel with a double O-ring seal system and a soft seat piston.

**Pressure Adjustment**

**CP-3 Pressure Adjustment**

Loosen the Jam Nut
Re-Torque After Adjusting

Use a Screwdriver to Adjust the Pressure Regulator

**USE A PRESSURE GAUGE WHEN ADJUSTING THE DF-200**

Turn the adjustor screw counter clockwise to reduce the output pressure or clockwise to increase the pressure. Be sure to re-torque the Jam Nut after adjusting the regulator.

**Changing the Regulator Spring**

Step 1. Remove the regulator by turning the “Base Nut/Adjustor Body” counter clockwise.

Step 2. After removing the regulator assembly, remove the spring and the conical plunger. Verify the O-ring is intact.

Step 3. Reset the conical plunger and place the spring inside the conical plunger.

Step 4. Replace the assembly in the base. Tighten the Base Nut to proper torque.

Stainless Steel components with a Double O-ring Seal System and Soft Seat Piston.

New o-rings are included in the Customer Service O-ring Kit if replacements are required.
PUREFLOW AIRDOG
LIFETIME LIMITED EXPRESS WARRANTY
FOR
Covered PureFlow AirDog I, II and Raptor Systems

IMPORTANT NOTICE
TO ACTIVATE YOUR PURFLOW AIRDOG WARRANTY, YOU MUST COMPLETE AND MAIL YOUR WARRANTY CARD TO PURFLOW AIRDOG WITH A COPY OF YOUR ORIGINAL SALES RECEIPT WITHIN 30 DAYS OF PURCHASE. FAILURE TO COMPLETE AND SUBMIT YOUR WARRANTY CARD WILL RESULT IN A WARRANTY PERIOD OF THE COVERED PRODUCE TO ONE (1) YEAR FROM THE DATE OF PURCHASE.

PureFlow AirDog (hereafter collectively, “SELLER”) warrants and guarantees only to the Original Purchaser (hereafter collectively, BUYER) that All PureFlow AirDog Systems (hereafter collectively, PRODUCT) shall be free from defects of materials and workmanship in the manufacturing process for as long as the BUYER owns the PRODUCT.

The Lifetime Limited Express Warranty is limited to the PRODUCT purchased by the original BUYER of the PRODUCT and limited solely to the parts contained within the PRODUCT and EXCLUDES ALL ELSE INCLUDING FILTERS AND WATER SEPARATORS. Any PRODUCT that is in question of Warranty must be returned, shipped prepaid, to PureFlow AirDog. All Warranty claims are subject to the approval of PureFlow AirDog. If it is determined that a Warranty claim exists, PureFlow AirDog will, at its sole discretion, replace the defective PRODUCT with a comparable PRODUCT, repair the defective PRODUCT, or refund the BUYER’S purchase price in exchange for the PRODUCT. Repairs or replacements are warranted for only the remainder of the original warranty period and only to the original BUYER.

Under no circumstances shall the SELLER be liable for any labor charged or travel time incurred in the diagnosis for defects, removal, or reinstallation of the PRODUCT, or any contingent expense.

Under no circumstances will the SELLER be liable for any damage or expense incurred by reason of the use or sale of the PRODUCT.

Other than expressly set forth herein, the SELLER shall in no way be responsible for the proper or improper use and service of the PRODUCT. In no event shall the SELLER be liable for any special, incidental, indirect or consequential damages of any kind or nature, whether or not the BUYER of the PRODUCT was advised of the possibility of damage or harm, arising or resulting from the use or performance of the PRODUCT and BUYER hereby waives the right to any and all such claims.

BUYER, acknowledges that he/she is not relying on SELLER’S skill or judgment to select or furnish goods suitable for any particular purpose and that SELLER has no liability that will extend beyond the scope of the LIMITED EXPRESS WARRANTY contained herein, and BUYER hereby waives all remedies or liabilities, expressed or implied, arising by operation of law or otherwise (including, without limitation, any obligation of SELLER with respect to fitness for any particular purpose; merchantability; and special, incidental, indirect or consequential damages) or whether or not occasioned by SELLER’S negligence.

SELLER disclaims any warranty and expressly disclaims any liability for personal inquiry or damages related to BUYER’S use of the PRODUCT. BUYER acknowledges and agrees that the disclaimer of any liability for personal injury is a material term for this agreement and BUYER agrees to indemnify SELLER and hold SELLER harmless from any claim related to the PRODUCT and its use or performance. Under no circumstances will SELLER be liable for any damages, liabilities, costs or expenses incurred as a result of or by reason of use, performance or sale of the PRODUCT, including without limitation, any damages, liabilities, costs or expenses incurred by reason of BUYER’S negligence related to those uses of the PRODUCT.

The proper installation of the PRODUCT is the sole responsibility of the BUYER. The SELLER assumes no liability regarding improper installation or misapplication of the PRODUCT.

SELLER hereby provides the following limited warranty as to description, quality, merchantability, fitness for the PRODUCT’S purpose, productiveness, or any other matter of SELLER’S PRODUCT sold herewith. The
SELLER shall be in no way responsible for the open use and service of the PRODUCT and the BUYER hereby waives all rights other than those expressly written herein. This Warranty shall not be extended or varied except by a written instrument signed by SELLER and BUYER.

IN THE EVENT THAT THE BUYER DOES NOT AGREE WITH THIS AGREEMENT, THE BUYER MAY PROMPTLY RETURN THE PRODUCT, IN A NEW AND UNUSED CONDITION, WITH A DATED PROOF OF PURCHASE, TO THE PLACE OF PURCHASE WITHIN THIRTY (30) DAYS FROM THE DATE OF PURCHASE FOR A FULL REFUND. THE BUYER AGREES THAT THE INSTALLATION OF THIS PRODUCT CONFIRMS THE BUYER HAS READ AND UNDERSTANDS THIS AGREEMENT AND ACCEPES THE TERMS AND CONDITIONS OF THIS AGREEMENT.

Warranty Procedure

In the unlikely event a warranty appears as if it may be warranted, the following steps are taken:

1. The customer discussed the symptoms of the problem with a PureFlow AirDog Technician. The customer is to have the system Serial Number and Model Number available for the Technician when the call is made. This will expedite all steps of the process.

2. The customer performs any and all tests requested by the PureFlow AirDog Technician. This is done to isolate the potential problem while eliminating potential installation or maintenance related issues.

3. If the PureFlow AirDog Technician determines based on the customer feedback concerning the requested testing that system may be at fault, the customer is advised that all returned pumps are tested upon arrival and should this returned pump perform at design criteria upon arrival, the customer will be charged a $50.00 fee.

4. The PureFlow AirDog Technician will first request the customer’s phone number in the event the phone call is accidentally disconnected and then transfer the customer to a PureFlow AirDog Customer Service Representative. Should a Customer Service Representative not be available, the Technician will offer the Customer the option to hold, call back, or receive a return call.

5. The PureFlow AirDog Customer Service Representative will check to determine if the customer’s Warranty Registration Card is on file.
   a. If no Warranty Registration is found, the customer will be required to supply the original purchase receipt showing the purchase date.
   b. If no Warranty Registration is found, the customer will be advised of the options should the system in question is out of the default warranty period (1 year).

6. The PureFlow AirDog Customer Service Representative will request the customer information, including: Name, Address, Phone Number, Model Number, Serial Number, Year / Make / Model of vehicle, Name of Dealer purchased from, Purchase Date, Description of Problem, Customers’ understanding of the resolution, and customer credit card information.

7. PureFlow AirDog will cover Ground Shipping charges to ship the replacement unit and will include a prepaid shipping label for the return of the defective unit. Any additional items ordered at the time of the replacement shipment will include their portion of the shipping cost.

8. A period of 15 Calendar Days from the time of shipment is provided for the receipt of the defective unit at the PureFlow AirDog facility. Failure to return ship the defective unit to arrive within the defined time period will result in a charge of $250.00 against the customer’s credit card as the purchase cost of the defective unit.
